INCOME DISTRIBUTION, 1968-69
CONSOLIDATED AND REVISED EDITION

PREFACE

A survey which was carried out in November 1969 at one half of the dwellings included in the quarterly population survey conducted in that month, provided information on the income of individuals and families for the year 1968-69 and on educational qualifications, level of schooling and labour force experience during the year. The results of the survey have been issued in three bulletins, entitled *Income Distribution, 1968-69* — Parts 1, 2 and 3, as follows :

	Reference No.	Date of Issue
Part 1	17.6	30 April 1973
Part 2	17.8	25 September 1973
Part 3	17.12	5 June 1974

This bulletin brings together all of the tables previously published, but in a more convenient form : Tables 1-32 relate to families and Tables 33-67 to individuals. At the same time the opportunity has been taken to incorporate a number of amendments to the estimates.

A similar survey in respect of the year 1973-74 was conducted in November 1974, and preliminary results were published in *Income Distribution, 1973-74 (Preliminary)* (Ref. No. 17.18) released on 22 September 1975. This bulletin will therefore not only serve as a useful source of reference for particulars of income distribution in 1968-69 but will also provide a background against which changes during the subsequent five years can be measured.

EXPLANATORY NOTES

1. **The population survey.** The survey was based on a multi-stage area sample of private dwellings (houses, flats, etc.) and non-private dwellings (hotels, motels, etc.), in the six States, the Northern Territory and the Australian Capital Territory, and covered about one half of one per cent of the population of Australia. The information was obtained from the occupants of selected dwellings by carefully chosen and specially trained interviewers, the interviews being carried out during a four-week period.

2. **Scope.** The estimates for individuals relate to all persons 15 years of age and over, except persons in institutions, members of the permanent armed forces, national servicemen enlisted in the Regular Army Supplement, certain diplomatic personnel customarily excluded from census and estimated populations and persons who were patients in institutions such as hospitals and sanatoria, and inmates of gaols, etc. for whom, for the purposes of the survey, the institution was regarded as their dwelling. However, where a husband was in the armed forces, or in an institution, his income for the year 1968-69 was, wherever possible, included in total family income.

INTERPRETATION OF RESULTS

3. Since the estimates are based on a sample, they are subject to sampling variability. (See Technical Note, page 65 for further details.) In addition, they are subject to errors of response and reporting.

4. Interviewers engaged in obtaining information on income were instructed to ask respondents to refer to records wherever possible, and in fact records were referred to in about half of all cases. In other cases the answers were based on memory, and frequently on the memory or knowledge of one person, generally the housewife. Some understatement in the estimates may be expected, because of imperfect recall of minor or irregular sources of income. Other errors may be due to genuine misunderstanding, or to misrepresentation.

5. Other points which should be kept in mind in interpreting the results of this survey are as follows :

- (i) For the purposes of the survey, income was defined to include (a) all income received while living in Australia, including income received from an overseas source and (b) all income received from an Australian source while living overseas.

- (ii) A person included in the survey in November 1969 who had lived outside Australia for the whole of 1968-69 was not asked the income questions. A person who had arrived in Australia towards the end of the reference year would have been recorded as receiving little or no income in Australia.

- (iii) The income received by a family or a person does not necessarily reflect the standard of living of that family or person. For example, although alimony and maintenance payments were counted as income, gifts or donations such as might be made by relatives who were not members of the household were not included, even though such gifts or donations may have been the sole means of support. No account was taken of the possible run-down of assets accumulated in the past.

- (iv) Some couples had married in the period July to November 1969, and some individuals, may have received no income in 1968-69. (They may, for example, have been at school or university.) Family and individual income would in such cases have been recorded as nil. However, for persons who had received any income during 1968-69 and had since married, family income would have been recorded as the sum of the two individual incomes.

- (v) Family income does not include amounts received by persons who were members of the family during all or part of the year 1968-69 if these persons no longer resided with the family at the time of the survey. Thus income received during 1968-69 by persons who had died before the survey would not have been included.

DEFINITIONS

6. **Income.** Questions were asked in respect of each person aged 15 years or over in the sample on the amount of income received in 1968-69 from each of the following sources : (1) money wages or salary; (2) own business, trade or profession (net income); (3) share in a partnership (net income); (4) government social service benefits; (5) superannuation or annuity; (6) interest, dividends, rent, etc.; (7) other sources, e.g. trust or will, maintenance or alimony.

7. **Income from wages or salary** was defined as gross income before taxation and other deductions were made. It included overtime and bonuses, gratuities and tips, fees and commission, and any contribution by the employer to the person's board or rent. Workers' compensation for temporary loss of wages was included, but compensation for an injury, for damage to personal property or for the reimbursement of medical fees was not regarded as income. Lump sum payments on retirement, living and travelling allowances, expense accounts, employers' contributions to superannuation or retirement funds and reimbursement of fees which were paid by the person for a training course were not regarded as income.

8. **Income from own business, trade or profession and income from a share in a partnership.** In both of these cases, net income was recorded. If no income had been received in 1968-69 or a loss had been made, or if all income had been retained in the business, income from these sources was recorded as nil. Where possible, the value of any goods taken from the business for use by family members (for example, meat on a farm, food from a retail grocery) was included as income.

9. **Earned income** is income from wages or salary or income from own business, trade or profession or income from a share in a partnership or the sum of any of these components. Recipients of earned income are referred to as "income earners", or "persons with earned income", as distinct from the all-inclusive term "income recipients", which refers to persons who received income from any source.

10. **Income from government social service benefits** includes income from items such as :

- (i) Child endowment or maternity allowance
- (ii) Pensions (e.g. age, invalid, widows', war service, war widows')
- (iii) Unemployment, sickness or special benefits
- (iv) TB allowance
- (v) Rehabilitation payments
- (vi) Government educational scholarships, including Commonwealth and State scholarships and bursaries. (Fees paid directly by governments to educational institutions are excluded.)

11. **Income from superannuation or annuity** includes government and private pensions or retirement benefits paid to a retired person or his survivors by a former employer, either directly or through a superannuation fund, insurance company, etc. and periodic receipts from annuities or insurance. Any lump-sum payment received by a person on his retirement was excluded.

12. The category **interest, dividends, rent, etc.** includes interest on savings, bonds, debentures, etc., dividends from stocks and shares, net income from rental of a house or other property to others, and net royalties.

13. **Income from other sources** comprises income from items such as (i) private educational scholarships; (ii) maintenance or alimony; (iii) a trust or will. Income paid at regular intervals and received by a beneficiary under a will, settlement, deed, gift or instrument of trust was included. However, a 'once only' payment from any of these sources was not regarded as income. Private payments (including financial support from other family members, friends or charitable organisations) were not regarded as income. Any supplementation of income by run-down of accumulated assets was also not regarded as income.

14. **A family** was generally defined to consist of two or more persons living in the same household, including the head of the family and any person or persons having any of the following relationships to the head :

- (i) wife
- (ii) son or daughter of any age, if unmarried and not accompanied by children of his or her own
- (iii) brother or sister 16 years of age or over, if unmarried and not accompanied by children of his or her own
- (iv) grandchild, if unmarried and not accompanied by either of his or her parents, nor by children of his or her own
- (v) ancestor, if not married and not accompanied by children under 16 years of age of his or her own; or
- (vi) any child under 16 years of age not accompanied by a parent, unless the child was related to some person in a second family in the household.

However, where the head of the family was in the armed forces or in an institution at the time of the survey and particulars of his income for the year 1968-69 were available, he was counted as a family member.

15. The following points should be noted in relation to the definition of a family in the previous paragraph :

- (i) the term 'relationship' includes relationships by blood, marriage or adoption
- (ii) the marriage relationship includes legal and de facto relationships

- (iii) widowed and divorced persons are considered to be not married.

A family, as defined, can contain no more than two married persons, and can contain two married persons only if these persons are husband and wife.

16. **Married couple families** are those comprising a married couple, with or without other family members (not necessarily children; see paragraph 14). **Other families** comprise a head and at least one other family member; they cannot include a married couple.

17. **Dependent children** comprise all family members under 15 years of age and other family members aged 15-20 years whose earned income in 1968-69 was nil or less than \$500. The majority of the latter group were full-time students.

18. **Family income** is the sum of the incomes received from all sources by all members of the family for whom particulars of income were obtained. (See paragraph 14.)

19. **Full-time and part-time workers.** Persons were classified as either full-time or part-time workers on the basis of the kind of work in which they were mostly engaged during 1968-69, full-time work being defined as work occupying 35 hours or more per week.

20. **Full-year, full-time workers** are those who had worked in Australia for at least 50 weeks during the year 1968-69 and had been engaged mostly in full-time work. A person who had worked for 26 weeks full-time and for 24 weeks part-time would have been classified as a full-year, full-time worker; however, it should be noted that most persons who work for a full year engage in either full-time or part-time work, but not in both. This is evidenced by the results of the survey *Labour Force Experience During 1968* (published in a mimeographed bulletin, Reference No. 6.26). The survey results indicated that, of persons who worked throughout all, or nearly all, of 1968 and who were mainly full-time workers, only about one person in one thousand did any part-time work at all.

21. **Full-year, part-time workers** are those who had worked in Australia for at least 50 weeks during the year 1968-69 and had been engaged mostly in part-time work.

22. **Part-year, full-time workers** are those who had worked in Australia for less than 50 weeks during the year 1968-69 and had been engaged mostly in full-time work, defined as work occupying 35 hours or more per week. A person who had worked for 25 weeks full-time and for 24 weeks part-time would have been classified as a full-time worker; however, it should be noted that

most persons who work for less than a full year engage in either full-time or part-time work, but not in both. This is evidenced by results of the survey *Labour Force Experience During 1968* (published in a mimeographed bulletin, Reference No. 6.26). The survey results indicated that, of persons who worked during part of 1968 and who were mainly full-time workers, only about six per cent also did some part-time work.

23. **Part-year, part-time workers** are those who had worked in Australia for less than 50 weeks during the year 1968-69 and had been engaged mostly in part-time work.

24. **Post-school qualifications** comprise university degrees, tertiary qualifications other than university degrees (shown in Tables 60, 62 and 63 as non-degree tertiary), technician level and trade level qualifications. Apart from university degrees, the levels were determined as follows :

Non-degree tertiary is a level relating to qualifications obtained following substantial advanced study beyond matriculation, conferred by institutions and professional associations, e.g. Associate of Australian Society of Accountants, Diploma in Business Studies, Teaching Certificate, Diploma of Engineering.

Technician is a level which requires theoretical knowledge, as well as practical skills, e.g. wool-classing or nursing. Certificates issued by technical colleges following periods of 4 or 5 years part-time study after passing intermediate or final secondary school examinations are classified as 'technician'. Technician level qualifications were classified according to the field of study as *technical* (mainly engineering and technological), *commercial* (accounting, administration, secretarial, etc.) or *other* (including nursing).

Trade is formal recognition of competence in a skilled manual occupation which is usually obtained through an apprenticeship and satisfactory progress in part-time studies concurrently with practical training (e.g. plumber, fitter, compositor, carpenter, hairdresser).

25. **Median income** is the amount which divides the distribution, e.g. of families or individuals, into two equal groups, one having incomes above the median and the other having incomes below it. Medians were calculated from grouped data, the class intervals being finer than those published in the tables. Linear interpolation was used within the class interval in which the median fell.

26. **Mean income** is the amount obtained by

dividing the total income of a group (e.g. families, income earners, income recipients) by the number of units in that group. In calculating means it was assumed that observations were spread evenly across class intervals, the mid-point of each interval being used in calculating group aggregates.

27. **Gini index of concentration.** This is one of the most widely used measures of inequality of income distribution. In the second diagram on page 8 a Lorenz curve has been drawn, showing cumulative percentages of families plotted against cumulative percentages of aggregate family income. (It can be seen from this curve, for example, that the lowest 10 per cent of families received only 2.2 per cent of aggregate family income.) The 'egalitarian line' shows the hypothetical situation in which all families receive the same income. The Gini index of concentration is the ratio of the area between the egalitarian line and the Lorenz curve to the area of the triangle below the egalitarian line. The index, always

between 0 and 1, is low for countries with relatively equal income distributions and high for countries with relatively unequal distributions.

Rise in the level of average earnings since 1968-69

28. The rise in incomes since the year 1968-69 has been considerable. However, the findings of the survey with regard to dispersion and relativity between different sources, different age groups and groups with different qualifications will still be valuable. As a measure of the rise, average weekly earnings per employed male unit (a series which refers only to wage and salary earners and which is published quarterly in a mimeographed statement, *Reference No. 6.18*) may be used as a rough guide. Estimates for the period 1968-69 to 1974-75, and increases in the series in absolute and relative terms, are shown below:

Period	Average weekly earnings (\$)	Increase since 1968-69	
		(\$)	(per cent)
Year 1968-69	70.40
1969-70	76.30	5.90	8.4
1970-71	84.80	14.40	20.5
1971-72	93.00	22.60	32.1
1972-73	101.50	31.10	44.2
1973-74	118.00	47.60	67.6
1974-75	148.30	77.90	110.7

NOTE. 1. Any discrepancies between totals and sums of components in tables are due to rounding.

2. Median and Mean incomes have been calculated to the nearest ten dollars.

Note. Because the income ranges in Tables 1, 34 and 55 are unequal, the numbers shown in the tables should not be plotted on the same scale. For the purposes of the diagrams they have therefore been converted to equivalent numbers on the basis of \$200 intervals of income. Actual figures are given in the tables. (See pages 10, 31 and 49.)

FAMILIES: TOTAL INCOME, 1968-69

DISTRIBUTION OF FAMILY INCOME, 1968-69

DECILES

Per Cent of Families	Per Cent of Aggregate Income
10	2.2
20	6.8
30	12.8
40	19.7
50	28.2
60	37.5
70	48.1
80	60.3
90	75.2
100	100

Gini index of concentration. For definition see page 7 paragraph 27. The calculated value using the diagram to the left is 0.33. For comparison, a recent study gives figures for family incomes in the U.S.A. as 0.36 and in Mexico as 0.50, indicating a greater degree of equality in Australia than in either of these two countries.

15-29	11.9	11.2	17.4	50.3	11.3	61.6	56.5	22.5	79.1
30-39				22.2		27.8	26.0	9.4	35.4
40-49	8.0	*	15.4	30.7	12.5	37.6	34.8	10.6	45.4
50-52	36.0	30.5	66.5	201.1	43.2	244.3	237.1	73.7	310.8
Total	55.9	62.3	118.2	364.3	80.7	445.0	420.2	143.0	563.2
Total (f)	2,619.9	1,055.9	3,675.8	1,206.5	753.6	1,960.1	3,826.4	1,809.5	5,635.9

(a) For definitions see explanatory notes. (b) Never married, widowed, divorced and permanently separated. (c) Persons who worked mostly full-time (see explanatory notes, paragraph 19). (d) Full-year, full-time workers. The estimates differ from those published in Tables 55, 56, 58, 59 because they exclude persons whose earned income for 1968-69 was nil, or who made a loss. (e) Persons who worked mostly part-time (see explanatory notes, paragraph 19). (f) Includes persons recorded as having earned income but for whom no duration of employment was recorded. Many of these persons reported that they received income from a share in a partnership.

* Less than 8,000. See page 65, paragraph 7.

(a) For definitions see explanatory notes. (b) Includes miners and quarrymen. (c) The totals differ from the sums of components because they include persons who were full-year, full-time workers during 1968-69 but for whom, because they were not in the labour force at the time of the survey, an occupation was not recorded. (d) Professional and technical, administrative, executive, managerial and related workers. (e) \$4,000-\$4,999, 15,100 \$5,000 and over, 13,000. (f) \$3,400-\$3,599, 11,200; \$3,600-\$3,799, 9,600; \$3,800-\$3,999, 8,100 (g) \$4,000-\$4,999, 14,600; \$4,500-\$4,999, 11,200; \$5,000 and over, 21,800.

* Less than 8,000. See page 65, paragraph 7.

NOTE. Occupation is that recorded at the time of the survey and is not necessarily the same as the occupation in which the person was engaged, or mainly engaged, during 1968-69.

Craftsmen, production-process workers and labourers, n.e.c. —						
Machinists, sewers, embroiderers, textile products, leather garments and gloves	*	*	1,720	1,670	1,740	1,710
Fitters, n.e.c., and fitters and turners (so described)	3,530	3,540	*	*	3,530	3,540
Machine tool setters and operators, metal working, incl. metal machinists (so described)	2,890	3,190	*	*	2,840	3,000
Motor vehicle mechanics	3,080	3,220	*	*	3,080	3,220
Sheet metal workers, can makers and panel beaters	3,150	3,110	*	*	3,140	3,100
Plumbers and pipe fitters	3,340	3,400	*	*	3,340	3,400
Welders and flame cutters	3,140	3,390	*	*	3,130	3,390
Boilermakers, incl. metal plate and structural steel workers	3,660	3,570	*	*	3,660	3,570
Electricians, incl. electrical mechanics	3,700	3,780	*	*	3,700	3,780
Telecommunications technicians	3,910	3,940	*	*	3,910	3,940
Linemen, electrical, cable jointers	3,190	3,280	*	*	3,190	3,280
Assemblers, process workers, metal electrical (so described)	2,880	2,900	1,900	1,930	2,310	2,430
Tradesmen's assistants, metal, electrical	2,840	2,880	*	*	2,830	2,870
Carpenters, joiners	3,370	3,390	*	*	3,370	3,390
Painters and decorators, building, construction and maintenance, incl. painters (so described)	3,110	3,270	*	*	3,110	3,270
Bricklayers, stonemasons	3,480	3,820	*	*	3,480	3,820
Plasterers	3,190	4,060	*	*	3,190	4,060
Concrete and terrazzo workers	3,240	3,320	*	*	3,240	3,320
Printing machinists, printers (so described)	3,500	3,730	*	*	3,400	3,530
Bakers, pastrycooks	3,040	3,280	*	*	2,800	3,200
Meat cutters, canners, preservers	3,060	3,260	*	*	3,010	3,190
Packers, wrappers, labellers	2,640	2,770	1,760	1,690	1,970	2,120
Operators of earthmoving and other construction machinery	3,100	3,360	*	*	3,100	3,360
Waterside workers	3,470	3,640	*	*	3,470	3,640
Storemen, incl. storemen and packers (so described)	2,890	2,970	*	*	2,880	2,950
Labourers, metals, engineering and electrical goods	2,700	2,780	*	*	2,680	2,760
Labourers, building and construction, n.e.c.	2,630	2,750	*	*	2,630	2,750
Service, sport and recreation occupations —						
Policemen and policewomen	3,930	3,900	*	*	3,930	3,900
Maids, hotel, hospital, incl. cabin stewards (excl. private households)	*	*	1,810	1,800	1,810	1,800
Catering and kitchen workers, incl. canteen assistants (excl. private households)	*	*	1,850	1,970	1,930	2,100
Domestic workers, private households, n.e.c.	*	*	1,270	1,260	1,270	1,260
Waiters and waitresses	*	*	1,770	1,800	1,930	2,070
Cleaners, offices, buildings	2,620	2,880	1,840	1,900	2,390	2,570
Barbers, hairdressers, beauticians and related workers	2,550	2,680	1,900	2,070	2,120	2,260
Attendants, hospital and other medical, incl. nursing aides and assistant nurses	2,700	2,860	1,740	1,710	2,170	2,210

(a) Total income from all sources. (b) For definitions see explanatory notes. (c) According to the classified list of occupations used for the 1966 population census.

* Estimate not shown because of high sampling variability.

NOTE. The occupations shown are those recorded at the time of the survey (November 1969). They are not necessarily the occupations or principal occupations engaged in during the year 1968-69.

(a) For definitions see explanatory notes. (b) Includes 11,900 males and 110,300 females who were married (excluding permanently separated). (c) Includes 8,000 males and 52,900 females who were married (excluding permanently separated).

* Less than 8,000. See page 65, paragraph 7.

TECHNICAL NOTE

Estimation procedure

Estimates derived from the quarterly population survey are obtained by using a ratio estimation procedure. This procedure ensures that survey estimates conform to the independently estimated distribution of the population by age and sex, rather than the age and sex distribution within the sample itself.

Reliability of the estimates

2. Since the estimates in this bulletin are based on a sample, they may differ from the figures that would have been obtained from a complete census using the same questionnaires and procedures. One measure of the likely difference is given by the standard error, which indicates the extent to which an estimate might have varied by chance because only a sample, and not the whole population, was enumerated. There are about two chances in three that a sample estimate will differ by less

than one standard error from the figures that would have been obtained from a comparable complete enumeration, and about nineteen chances in twenty that the difference will be less than two standard errors.

3. Space does not allow for the separate indication of the standard errors of all estimates in this bulletin. A table of standard errors for general application is given below. These figures will not give a precise measure of the standard error of a particular estimate but they will provide an indication of its magnitude. An example of the use of the table is as follows: if the estimate obtained from the sample is 100,000 and the standard error is 4 per cent of the estimate, i.e. 4,000, there are about two chances in three that the true figure is within the range 96,000 to 104,000 and about nineteen chances in twenty that this figure is between 92,000 and 108,000.

APPROXIMATE STANDARD ERRORS OF ESTIMATES

Size of estimate (Persons)	Approximate standard error of estimates		Size of estimate (Persons)	Approximate standard error of estimates	
	Persons	Per cent of estimate		Persons	Per cent of estimate
8,000	1,250	16	100,000	3,750	3.8
10,000	1,375	14	200,000	5,000	2.5
15,000	1,500	10	500,000	6,250	1.3
20,000	1,750	9	1,000,000	6,875	0.7
50,000	2,500	5	2,000,000	10,000	0.5

4. These standard errors apply to estimates for individuals. The standard error of an estimate for families will generally be slightly lower than the standard error of an estimate of the same size for individuals.

5. The reliability of an estimated percentage, computed by using sample data for both numerator and denominator, depends upon both the size of the numerator and the size of the denominator. However, the per cent standard error of the estimated percentage will generally be lower than the per cent standard error of the estimate of the numerator. The per cent standard errors of the numerators can be obtained from the table above.

6. Medians and means published in this bulletin are also subject to sampling variability. Estimated relative standard errors of these medians and means are all less than five per cent.

7. As the standard errors in the table show, the

smaller the estimate the higher is the relative standard error. Very small estimates would thus be subject to such high standard errors (relative to the size of the estimate) as to detract seriously from their value for most reasonable uses. In the tables in this bulletin, estimates less than 8,000 have not been shown. Although figures for these small components can in some cases be derived by subtraction, they should not be regarded as reliable.

8. The imprecision due to sampling variability, which is measured by the standard error, should not be confused with inaccuracies that may occur because of imperfections in reporting by interviewers and respondents. Inaccuracies of this kind are referred to as the non-sampling error, and they may occur in any enumeration, whether it be a full count or only a sample. Every effort is made to reduce the non-sampling error to a minimum by careful design of questionnaires, intensive training and supervision of interviewers and efficient operating procedures.
